Data Collection Concept

February 27, 2018

1 Problem

Insecurity and increased crime rate in Wakiso district.

2 Introduction

Over the past two years, some many cases have been reported to Uganda Police like armed robberies, prostitution, girl rape but the nation was more rocked by the merciless killing of women which were reported in areas of Katabi, Entebbe Municipality and Nansana Municipality. These crimes were committed in 2017 but up to now Ugandan Police has not yet come up with a well explained crime report explaining the causes of these murders more so the culprits who have been apprehended for killings of these women. Several security policies have been introduced by Police spearheaded by the Inspector General of Police, IGP Kale Kayihura like the "Mayumba kummi" and community meetings with the residents of Entebbe and Nansana respectively which were intended to restore peace and order in Wakiso district which have so far yielded no results whatsoever.

3 Motive

I have taken interest in collecting data about this matter in order to make sense of the crimes and also make analysis which later can be used to make patterns on how these crimes can be reduced and make our communities safe for the residents.

4 Data to be collected

I will interview the residents of the most affected communities in Wakiso district. These interviews will be closely guided by the questions which will be in a form. I will use ODK collect to gather all my data. I will collect data in form of pictures of places where the nationals believe that most criminals originate and

carry out these crimes from. The GPRS co-ordinates of the places visited will also be recorded.
